We, at Net Elec have successfully found CSL Silicone Inc Anti-Corrosion coating **CSL AC Si-COAT® 579®** would give the most protective performance and cost efficiency.

5 years ago, during our first applications of **Si-COAT® 579®** for our end-user client that "the Moroccan National grid Company (ONEE)" on Metallic pylons and concrete posts, we have achieved cost saving by using this Anti-Corrosion coating that is single component, room temperature vulcanizing (RTV), it's only one coat, easy to apply and it provides long-lasting protection.

Another big advantage of using **CSL AC Si-COAT® 579®** is both time and cost saving with maximum protection. Conventional AC Coating do require sand-blast + Primer + AC coating + Finish coating and it does degrade over time while with ONE COAT of **Si-COAT® 579®**, that is a Self-priming single coat with minimal surface preparation (no abrasive blasting or profiling required) therefore, less time and labor costs.

We apply **Si-COAT® 579®** either with Airless equipment or a brush on the support: It's an easy One-Coat Application guaranteeing Long-lasting protection from corrosion (stops rust creep) at effective Cost for such a superior protection.

Our clients is highly satisfied with **CSL Silicones Inc. AC Si-COAT® 579®** and we continue promoting this AC all over the Region in North Africa.

Sincerely,

Mohamed HAZA, President
